

emotion of sauna.

S LINE – powerful design

S-Line – a perfect combination of exclusive design, innovative technology and excellent reliability. The new S-Line redefines exclusive sauna heaters with its clear-cut, minimalistic design and the well-thought selection of the finest quality materials. The exterior design features a striking combination of straight lines, massive yet elegant steel with the raw sauna rocks and steam, making every model of this range to a highlight in every sauna cabin. S-Line heaters are as service-friendly as beautiful – the heating elements are mounted on a rack and may be conveniently removed without the need to remove the rocks. The internal and external shell is completely made of the best quality stainless steel. S-Line heaters are highly versatile – thanks to the various rock stores and different power outputs of the integrated vaporizer (or an optional Steamfix system for an external steam generator) it is possible to select a suitable heater for almost any sauna cabin size and climate preference.
