

EOS Future

Distinctive character, unique design.

EOS Future stands out through its futuristic design – the handcrafted **polished stainless steel frames** form an attractive contrast to the **elegant matt black finish** and emphasize the futuristic and noble character. The exclusive sauna heater for the dry Finnish sauna is completely inclined. The special feature is that the body appears to be floating above the elegant natural stone base.

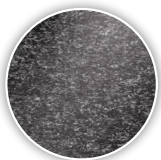

You have the choice between **three high-class types of natural stone for the base**: Powerful and gentle at the same time, the elegant natural stone base complements the perfect design. With the optional **matching stone strips at the top part** (Future Stone model), a harmonious overall appearance is created, or you can opt for a modern, linear top part with a matt black finish.

With the optionally available **lighting in the base**, the elegant and floating appearance of the sauna heater series is additionally emphasized and effectively set. Different colour variations can be selected to suit your mood.

EOS Future – EOSafe L optional

The included **40 kg diabase sauna stones** guarantee constant temperature stability. The **EOSafe L safety system**, which is discreetly designed in black, provides additional safety and can be easily attached to the top of the rock store frame. The optionally available **heater guard rail made of polished stainless steel** is absolutely extraordinary. Separate guard rail brackets are available for an individual safety guard rail.
