EOS Vision

Distinctive character, unique design.

The unusual, unique design makes EOS Vision the absolute highlight. The handcrafted **polished stainless steel frames** form an attractive contrast to the **elegant matt black finish** and emphasize the futuristic and noble character. The exclusive sauna heater for the dry Finnish sauna is angled twice in its inclination – the body appears to be floating above the elegant natural stone base.

You have the choice between **three high-class types of natural stone for the base**: Powerful and gentle at the same time, the elegant natural stone base complements the perfect design. With the optional **matching stone strips at the top part** (Vision Stone model), a harmonious overall appearance is created, or you can opt for a modern, linear top part with a matt black finish.

With the optionally available **lighting in the base**, the elegant and floating appearance of the sauna heater series is additionally emphasized and effectively set. Different colour variations can be selected to suit your mood.

EOS Vision – EOSafe L optional

The included **40 kg diabase sauna stones** guarantee constant temperature stability. The **EOSafe L safety system**, which is discreetly designed in black, provides additional safety and can be easily attached to the top of the rock store frame. The optionally available **heater guard rail made of polished stainless steel** is absolutely extraordinary. Separate guard rail brackets are available for an individual safety guard rail.
