

Diabas sauna stones

for all EOS sauna heaters

High quality olivine diabase sauna stones in proven EOS quality. Suitable for all EOS sauna heaters.

Advantages and benefits:

- High thermal conductivity and heat storage capacity.
- Optimal durability even by intensive use.
- Available in sizes 30 - 60 mm, 50 - 100 mm and 100 - 150 mm for small or large sauna heaters.
- Available as 8 kg, 15 kg, 20 kg or 25 kg packages.
- Regular quality inspection and practical tests.

Physical properties:

Type: olivine diabase
 Structure: medium-grained
 Colour: medium grey to grey-green
 Size: 30 - 60 mm, 50 - 100 mm and 100 - 150 mm

Make sure to control sauna stones regularly. The stones in direct contact with the heating elements are exposed to extreme thermal conditions. The rapid temperature changes cause small cracks in the stones which lead to disintegration of stones over the time. Small particles will fall down and block the proper air circulation. This may cause continuous overheating and will shorten the service life of the heater and of the heating elements.

Reshuffle the stones regularly to improve the air circulation. Remove and replace the cracked stones.
